TOTAL SOVIET GROUND FORCES	2,500,000	175*

*These 175 divisions consist of 105 rifle divisions, 35 mechanized, 20 tank, and 15 cavalry. In addition, it is estimated that the Soviets have 15 artillery and 30 antiaircraft artillery divisions. Inasmuch as these are a supporting arm, they are not included in the estimate of line or combat divisions.

All Soviet divisions are estimated to be at approximately 70 percent of T/O strength. The Soviet mobilization plan provides for building existing divisions up to T/O strength within M plus 6 days. In view of their detailed and efficient mobilization system, it is estimated the Soviets could achieve their mobilization plan in this respect. Thus, even though existing divisions may be at only 70 percent of T/O strength, for planning purposes they may be considered at full strength because of the short time required to build them up.
